July 2011

Return on Investment: Evidence-Based Options to Improve Statewide Outcomes

—July 2011 Update—

The Washington State Legislature directed the Washington State Institute for Public Policy (Institute) to "calculate the return on investment to taxpayers from evidence-based prevention and intervention programs and policies."

In this update, we identify public policies that have been shown to improve the following outcomes:

- ✓ Child maltreatment
- ✓ Mental health
- ✓ Crime
- ✓ Public assistance
- ✓ Education
- ✓ Public health
- ✓ Labor earnings
- ✓ Substance abuse

This report presents our findings as of July 2011. Prior to the 2012 Washington legislative session, we will update and extend these results. The Legislature authorized the Institute to receive outside funding for this project; the MacArthur Foundation supported 80 percent of the work and the Legislature funded the other 20 percent.

The "big picture" purpose of this research is to help policy makers in Washington identify evidence-based strategies that can deliver better outcomes per dollar of taxpayer spending. In a time of fiscal constraint, this goal seems especially important.

This short report summarizes our current findings. Readers can download detailed results in two accompanying technical appendices.²

Background

In the mid-1990s, the legislature began to direct the Institute to undertake comprehensive reviews of "evidence-based" policy strategies. The initial efforts were in juvenile and adult criminal justice. We identified several juvenile justice and adult corrections' programs—not then operating in Washington—that had the potential to reduce crime and save Washington taxpayers money.³

Summary

The Washington State Institute for Public Policy was created by the 1983 Washington Legislature to carry out non-partisan research assignments.

The 2009 Legislature directed the Institute to "calculate the return on investment to taxpayers from evidence-based prevention and intervention programs and policies." The Legislature instructed the Institute to produce "a comprehensive list of programs and policies that improve . . . outcomes for children and adults in Washington and result in more cost-efficient use of public resources."

The current project continues a long-term effort in Washington to identify evidence-based ways to deliver better outcomes per taxpayer dollar. This short report summarizes our findings as of July 2011. Readers can download detailed results in two technical appendices.

In subsequent sessions, the legislature used the information to begin a series of policy reforms.⁴ Many "real world" lessons were learned about implementing these programs statewide.⁵

Today, the results of these crime-focused efforts appear to be paying off. Relative to national rates, juvenile crime has dropped in Washington, adult criminal recidivism has declined, total crime is down, and taxpayer criminal justice costs are lower than alternative strategies would have required.⁶

In the early 2000s, the legislature began to direct the Institute to apply the same benefit-cost approach to other public policy areas, including K–12 education, early childhood education, child welfare, adult mental health, and substance abuse. This current project updates, refines, and extends these previous assignments.

Our ongoing goal is to provide policy makers with better "bottom-line" estimates each successive legislative session.

General Research Approach

Over the last decade, as we have carried out these assignments, we have been improving a four-step research approach.

- We systematically assess evidence on "what works" (and what does not) to improve outcomes.
- We calculate costs and benefits for Washington State and produce a Consumer Reports-like ranking of public policy options.
- 3) We measure the riskiness of our conclusions by testing how bottom lines vary when estimates and assumptions change.
- 4) Where feasible, we provide a "portfolio" analysis of how a combination of policy options could affect statewide outcomes of interest.

For this project, we have also developed a software application to help legislative and executive staff use the information, and to respond to requests from other states.

⁷ Other benefit-cost studies prepared by the Washington State Institute for Public Policy for the legislature include:

Step 1: What Works? In the first research step, we estimate the capability of various policies and programs to improve outcomes. We carefully analyze all high-quality studies from the United States and elsewhere to identify well-researched interventions that have achieved outcomes (as well as those that have not). We look for research studies with strong, credible evaluation designs, and we ignore studies with weak research methods. Our empirical approach follows a meta-analytic framework to assess systematically all relevant evaluations we can locate on a given topic.

Step 2: What Makes Economic Sense? Next, we insert benefits and costs into the analysis by answering two questions.

- ✓ How much does it cost to produce the results found in Step 1?
- How much is it worth to people in Washington State to achieve the outcome? That is, in dollar and cents terms, what are the program's benefits?

To answer these questions, we developed—and continue to refine—an economic model that assesses benefits and costs. The goal is to provide an internally consistent valuation so that one option can be compared fairly to another. Our bottom line benefit-cost measures include standard financial statistics: net present values, benefit-cost ratios, and rates of return on investment.

We present these monetary estimates from three distinct perspectives: the benefits that accrue solely to program participants, those received by taxpayers, and any other measurable (non-participant and non-taxpayer) monetary benefits.

The sum of these three perspectives provides a "total Washington" view on whether a program produces benefits that exceed costs. Restricting the focus solely to the taxpayer perspective can also be useful for fiscal analysis and state budget preparation.

Step 3: Assessing Risk. The third analytical step involves testing the robustness of our results. Any tabulation of benefits and costs necessarily involves uncertainty and some degree of speculation about future performance. This is expected in any investment analysis, whether it is in the private or public sector. Therefore, it is important to understand how conclusions might change when assumptions are altered. To assess risk, we perform a "Monte Carlo simulation" in which we vary the key factors in our calculations. The purpose of the risk analysis is

Lee, S., Aos, S., & Miller, M. (2008). Evidence-based programs to prevent children from entering and remaining in the child welfare system: Benefits and costs for Washington (Document No. 08-07-3901).

Aos, S., Mayfield, J., Miller, M., & Yen, W. (2006). Evidencebased treatment of alcohol, drug, and mental health disorders: Potential benefits, costs, and fiscal impacts for Washington State (Document No. 06-06-3901).

Aos, S., Miller, M., & Drake E. (2006). Evidence-based adult corrections programs: What works and what does not (Document No. 06-01-1201).

Aos, S., Lieb, R., Mayfield, J., Miller, M., & Pennucci A. (2004). Benefits and costs of prevention and early intervention programs for youth (Document No. 04-07-3901).

to determine the odds that a particular approach will at least break-even. This type of risk and uncertainty analysis is used by many businesses in investment decision making; we employ the same tools to test the riskiness of the public sector options considered in this report.

Step 4: Impacts on Statewide Outcomes. In the final analytic step, we estimate the degree to which a "portfolio" of programs and policies is likely to affect statewide outcomes. We initiated portfolio analysis in 2006, estimating how a combination of prevention, juvenile justice, and adult corrections' programs could influence Washington's crime rate, the need to build prisons, and overall state and local criminal justice spending. The legislature used this information in subsequent sessions to craft budget and policy decisions. In the near future, we anticipate expanding portfolio analysis to other outcomes such as high school graduation.

July 2011 Results

In this report, we summarize results from Steps 1, 2, and 3 of our research. We prepare a *Consumer Reports*-like list of what works and what does not, ranked by benefit-cost statistics and a measure of investment risk.

Bottom Line. We identify a number of evidence-based options that can help policy makers achieve desired outcomes as well as offer taxpayers a good return on their investment, with low risk of failure. Washington is already investing in several of these options. We also find other evidence-based options that do not produce favorable results.

Summary Table. In Exhibit 1, we have arranged the information by major topic area. Some programs listed, of course, achieve outcomes that cut across these topic areas. For each program, all the specific outcomes measured in the studies are described in the first technical appendix.

For some programs, we found insufficient information to allow a calculation of benefits and costs. We list these programs in each topic area, along with the reason for their exclusion. **Example.** To illustrate our findings, we summarize results for a program called Functional Family Therapy (FFT), designed for juveniles on probation. This program is listed in the juvenile justice topic area in Exhibit 1. FFT was originally tested in Utah. Washington began to implement the program in the mid-1990s. The legislature continues to fund FFT, and it is now used by many of Washington's juvenile courts.

- We reviewed all research we could find on FFT and found eight credible evaluations that investigated whether it reduces juvenile crime. The technical appendix provides specific information on the eight studies in our metaanalysis of FFT; for example, two of the eight were from Washington.
- In Exhibit 1, we show our estimate that FFT
 achieves total benefits of \$37,739 per FFT
 participant (2010 dollars). These benefits spring
 primarily from reduced juvenile crime, but also
 include labor market and health care benefits due
 to increased probability of high school graduation.
- Of the total \$37,739 in benefits, Exhibit 1 shows that we expect \$8,536 to be received by taxpayers and \$29,203 will accrue to others, primarily people who were not victimized by the avoided crimes.
- Exhibit 1 shows that the program costs \$3,190 per participant to implement in Washington.
- Exhibit 1 also displays our benefit-cost summary statistics for FFT. The net present value (benefits minus costs) is \$34,549, and the benefit to cost ratio (benefits divided by costs) is \$11.86. The internal rate of return on investment is an astounding 641 percent. Finally, when we performed a risk analysis of our estimated bottom line for FFT, we found that the program has a 99 percent chance of producing benefits that exceed costs.
- Thus, one would conclude that FFT is an attractive evidence-based program that reduces crime and achieves a favorable return on investment, with a small chance of an undesirable outcome. These are the central reasons why FFT continues to be part of Washington's crime-reduction portfolio.

As noted, in addition to the summary information displayed in Exhibit 1, we have prepared two technical appendices. The first appendix presents detailed results for each program summarized in Exhibit 1, while the second appendix provides a comprehensive description of the research methods used to compute the estimates.

Substance abuse prevention and treatment programs for which we have not calculated benefits and costs (at this time):

CBT for Substance Abusers Review in process; results planned for December, 2011. Relapse Prevention Review in process; results planned for December, 2011.

Project Alert See previous WSIPP publications for past findings; an update is planned for December, 2011. Midwestern Prevention Project See previous WSIPP publications for past findings; an update is planned for December, 2011. See previous WSIPP publications for past findings; an update is planned for December, 2011. Project Towards No Tobacco Use

All Stars See previous WSIPP publications for past findings; review in process. See previous WSIPP publications for past findings; review in process. Minnesota Smoking Prevention Program

Brief Interventions for Substance Abusers Review in process Pharmacotherapies for Substance Abuse Review in process

Project Northland See previous WSIPP publications for past findings. DARE See previous WSIPP publications for past findings.

Adult Mental Health

See Technical Appendix I for meta-analytic results for adult mental health programs covered in this review. We have not have not completed our computation of benefits and costs for these programs.

CBT for Adult Anxiety See Technical Appendix I for meta-analytic results. **CBT** for Adult Depression See Technical Appendix I for meta-analytic results.

Remote CBT Review in process; an update is planned for December, 2011. Treatments for Post-Traumatic Stress Disorder Review in process; an update is planned for December, 2011.

Eye Movement Desensitization and Reprocessing Review in process. Day Programs for Mentally III Adults Review in process. Psychotherapies for Bipolar Disorder Review in process. Family Therapies for Adults With Schizophrenia or Bipolar Review in process. Primary Care Interventions for Depression Review in process.

Public Health

See Technical Appendix I for meta-analytic results for prevention programs targeting teen pregnancy and obesity. We have not have not completed our computation of benefits and costs for these programs.

Teen Pregnancy Prevention:

Postponing Sexual Involvement See Technical Appendix I for meta-analytic results. School-Based Service Learning See Technical Appendix I for meta-analytic results. School-Based Sexual Education See Technical Appendix I for meta-analytic results. Teen Outreach Program See Technical Appendix I for meta-analytic results. Adolescent Sibling Pregnancy Prevention See Technical Appendix I for meta-analytic results.

Obesity Prevention:

School Programs for Healthy Eating See Technical Appendix I for meta-analytic results. School Programs for Physical Activity See Technical Appendix I for meta-analytic results. School Programs for Healthy Eating & Physical Activity See Technical Appendix I for meta-analytic results. Too few rigorous evaluations to date. Early Child Care Nutrition & Physical Activity

Taxes on Sweetened Beverages and Snack Food Too few rigorous evaluations to date. Nutrition Labeling on Menus & Posting Nutritional Information Too few rigorous evaluations to date.

Housing

See Technical Appendix I for meta-analytic results for housing programs for offenders returning to the community and adults with mental illness. We have not have not completed our computation of benefits and costs for these programs.

Housing Supports for Offenders Returning to the Community See Technical Appendix I for meta-analytic results. Housing Support for Adults With Mental Illness See Technical Appendix I for meta-analytic results. Housing Supports for Serious Violent Offenders See Technical Appendix I for meta-analytic results.

Notes to Exhibit 1

- Benefit to cost ratios and return on investment statistics cannot be computed in every case; we list "n/e" for those that cannot be reliably estimated.
- ² Inst. = state institutionalized juvenile justice populations
- ³CBT = Cognitive Behavioral Therapy
- ⁴ Under the child welfare heading, we include several behavioral parent training programs administered by Washington State's child welfare system. These programs also apply to children's mental health.
- Triple-P = Triple-P Positive Parenting Program
- ⁶ NBPTS = National Board for Professional Teaching Standards
- ⁷For specific behavioral parent training programs currently administered by Washington State's child welfare system, see the Child Welfare topic heading.
- ⁸ MMT = Multimodal Therapy
- ⁹ BPT = Behavioral Parent Training
- ¹⁰ MST = Multisystemic Therapy
- ¹¹ BASICS = Brief Alcohol Screening and Intervention of College Students

For further information, contact Steve Aos at saos@wsipp.wa.gov

Document No. 11-07-1201

The Washington Legislature created the Washington State Institute for Public Policy in 1983. The Institute is governed by a Board of Directors that represents the legislature, governor, and public universities. The Board guides the development of all Institute activities. The mission of the Institute is to assist policymakers, particularly those in the legislature, in making informed judgments about important, long-term issues facing Washington State.
