

January 2014
Inventory of Evidence-Based, Research-Based, and Promising Practices
For Prevention and Intervention Services for Children and Juveniles in Child Welfare, Juvenile Justice, and Mental Health Systems

Budget Area	Program/Intervention	Manual	Current Definitions	Suggested Definitions	Cost-beneficial	Reason Program Does Not Meet Suggested Evidence-Based Criteria (see full definitions below)	Percent Minority
Child Welfare	Intervention						
	Family Search and Engagement	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Fostering Healthy Futures	Yes	⊙	⊙	N/A	Single evaluation	56%
	Functional Family Therapy (FFT) for children in the child welfare system	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Intensive Family Preservation Services (Homebuilders)	Yes	●	●	Yes (100%)		48%
	Multisystemic Therapy (MST) for children in the child welfare system	Yes	⊙	⊙	N/A	Heterogeneity/Single evaluation	18%
	Other Family Preservation Services (non-Homebuilders)	Varies*	⊙	P	No (0%)	Weight of evidence	68%
	Parent Child Assistance Program	Yes	P	P	N/A	Weight of evidence	N/A
	Parent-Child Interaction Therapy	Yes	●	●	Yes (100%)		33%
	Parents for Parents	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Partners with Families and Children	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Pathway to Reunification	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Safecare	Yes	⊙	●	Yes (98%)		44%
	Prevention						
	Circle of Security	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Healthy Families America	Yes	●	⊙	No (18%)	Benefit-cost	73%
	Kaleidoscope Play and Learn	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Nurse Family Partnership	Yes	●	●	Yes (76%)		51%
	Other Home Visiting Programs for At-Risk Parents	Varies*	●	⊙	No (26%)	Benefit-cost	50%
	Parent Child Home Program	Yes	⊙	P	No (26%)	Weight of evidence	64%
	Parent Mentor Program	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Parents and Children Together (PACT)		P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A
	Parents as Teachers	Yes	●	⊙	No (36%)	Benefit-cost	52%
Promoting First Relationships	Yes	P	P	N/A	No rigorous evaluation measuring outcome of interest	N/A	
Safe Babies, Safe Moms	Yes	P	P		No rigorous evaluation measuring outcome of interest	N/A	
Triple P (system)	Yes	⊙	●	Yes (100%)		33%	

Key:

- Evidence-based
- ⊙ Research-based
- P Promising
- ⊖ Produces null or poor outcomes

See definitions and notes at the end of the inventory.

January 2014
Inventory of Evidence-Based, Research-Based, and Promising Practices
For Prevention and Intervention Services for Children and Juveniles in Child Welfare, Juvenile Justice, and Mental Health Systems

Definitions and Notes:

Current Law Definitions:

- Evidence-based: A program or practice that has had multiple site random controlled trials across heterogeneous populations demonstrating that the program or practice is effective for the population.
- Research-based: A program or practice that has some research demonstrating effectiveness, but that does not yet meet the standard of evidence-based practices.
- Promising practice: A practice that presents, based upon preliminary information, potential for becoming a research-based or consensus-based practice.

Suggested Definitions:

- Evidence-based: A program or practice that has been tested in heterogeneous or intended populations with multiple randomized and/or statistically-controlled evaluations, or one large multiple-site randomized and/or statistically-controlled evaluation, where the weight of the evidence from a systematic review demonstrates sustained improvements in at least one of the following outcomes: child abuse, neglect, or the need for out of home placement; crime; children's mental health; education; or employment. Further, "evidence-based" means a program or practice that can be implemented with a set of procedures to allow successful replication in Washington and, when possible, has been determined to be cost-beneficial.
- Research-based: A program or practice that has been tested with a single randomized and/or statistically-controlled evaluation demonstrating sustained desirable outcomes; or where the weight of the evidence from a systematic review supports sustained outcomes as identified in the term "evidence-based" in RCW (the above definition) but does not meet the full criteria for "evidence-based."
- Promising practice: A program or practice that, based on statistical analyses or a well-established theory of change, shows potential for meeting the "evidence-based" or "research-based" criteria, which could include the use of a program that is evidence-based for outcomes other than the alternative use.
- Cost-beneficial: A program or practice where the monetary benefits exceed costs with a high degree of probability according to the Washington State Institute for Public Policy.

Reasons Programs May Not Meet Suggested Evidence-Based Criteria:

- Benefit-cost: The WSIPP benefit-cost model was used to determine whether a program meets this criterion. Programs that do not achieve at least a 75% chance of positive net present value do not meet the benefit-cost test.
- Heterogeneity: To be designated as evidence-based under current law or the proposed definition, a program must have been tested on a "heterogeneous" population. We operationalized heterogeneity in two ways. First, the proportion of minority program participants must be greater than or equal to the minority proportion of children in Washington State aged 0 to 17. From the 2010 Census, for children aged 0 through 17 in Washington, 68% were white and 32% minority. Thus, if the weighted average of program participants had at least 32% minorities then the program was considered to have been tested on a heterogeneous population. Second, the heterogeneity criterion can also be achieved if at least one of the studies has been conducted on youth in Washington and a subgroup analysis demonstrates the program is effective for minorities ($p \leq .2$). Programs passing the second test are marked with a ^. Programs that do not meet either of these two criteria do not meet the heterogeneity definition.
- Program cost: A program cost was not available to WSIPP at the time of the inventory. Thus, WSIPP could not conduct a benefit-cost analysis.
- Single evaluation: The program does not meet the minimum standard of multiple evaluations or one large multiple-site evaluation contained in the current or proposed definitions.
- Weight of evidence: Results from a random effects meta-analysis ($p > .10$) indicate that the weight of the evidence does not support desired outcomes, or results from a single large study indicate the program is not effective.

* **Varies:** This is a general program/intervention classification. Some programs within this classification have manuals and some do not. The results listed on the inventory represent a typical, or average, implementation. Additional research will need to be completed in order to establish the most effective sets of procedures within this general category.
